NOTICE

1982. Volume 1. n° 4.

JUIN 1982

GESAG Production - Edition Jacques BONABOT. Leopold I laan, 141. BRUGGE, Belgique.

This is our fourth NOTICE and as a GESAG production we must confess that the publication is very difficult in front of the post office taxation, the economic situation in our nation. Also the Bulletin du GESAG meets some difficulties in its edition.

The only way to assure a continuity in the edition of our NOTICE is to present these ones inside the Bulletin du GESAG itself, as an appendix.

Yes, of course, E.W.T. will receive an inevitable publicity but it is the only way to save an important contribution on european scale.

Do you agree for NOTICE starting in the december issue of the Bulletin du GESAG ? If yes, with the mention - or not - of your identity ? We are waiting after your answer. Thank you.

The Editor.

Ceci est notre quatrième NOTICE et comme production du GESAG nous devons avouer que la publication en est difficile face aux taxations de la régie des postes, face à la situation économique du pays. Même le Bulletin du GESAG rencontre des difficultés dans son édition.

La seule manière de maintenir une continuité dans l'édition de NOTICE est de la présenter dans le Bulletin du GESAG lui-même, en forme d'appendice.

Oui, en effet, inévitablement nous donnerons une certaine publicité au G.T.E. mais c'est la seule manière de sauver une importante contribution à l'échelle européenne.

Acceptez-vous la parution de NOTICE dès le numéro de décembre du Bulletin du GESAG ? Si oui, avec la mention - ou non - de votre identité ? Nous attendons votre réponse. Merci.

\* Alain Gamard - Listing des cas français avec entités - 16 janvier 1982 G.T.E.

## STRANGENESS FACTORS

### 1. Introduction.

The essence of this research is a very restricted selection of Type 1 phenomena taken from very strange cases and typical UFOs; potentially useful nocturnal lights, balls of fire and other cases not quite so rich in information. This selection of cases (in truth just 621 retained from a sample of almost 3000 which were examined) has been applied to a series of 103 indices of strangeness (1)

### 2. Primary documentation.

- A chronological file which principally consists of the 621 cases.
- A list of 103 "indices" which is distributed amongst 12 "characteristics" (lettered between A and W)

Each characteristic, with the indices, is then placed into the files, which then display the different cases which have that particular index. (2)

### 3. Definitions

Strangeness The strangeness is defined by an aspect of observation which appears to us to be extraordinary (with reference to our normal perception)

Index of

Strangeness A description element, situation or particular action which diverges significantly from the normal course of an event or observation.

Characteristic of Strangeness

A collection of strangeness indices.

Level of Strangeness

The number of indices which are to be found in any observation (varying between 1 and 8)

## Index of the "most strange"

### (+) Factors

As well as classification by characteristic, the indices have been placed into 5 groups ... from the most "strange" (factor 5) to more and more "normal" (factors 4,3,2 and 1 respectively). This classification was formulated by J. Bonabot.

This allows us to distinguish all events by their own factor (or index of the most strange +); giving us a possible classification according to "importance", with- in the degrees of strangeness

#### 4. Presentation of cases.

-Catalogues or lists should represent: date, time, place, province, country, number of witnesses, name of principal witness, indices of the case, level of strangeness, index of the "most strange" factor, indicators S or M.

These last letters are internal references from my own files (see here below).

#### Notes - Indicators S or M.

- All cases have an index which shows the correspondance with science-fiction (S) and mythology (M) These allow us to study the development of the UFO phenomenon alongside that of science-fiction and myths (which is necessary for a complete understanding of the enigma)

- The indices which show correspondance with science-fiction have been devised by B. Méheust (in his book "De La Science-Fiction aux Soucoupes Volantes).

The indices which show correspondance with mythology have been determined by J. Bastide (in his book "La Mémoire des OVNI").

Different kinds of listing are thus possible wherever required; eg:

by country, by year, by strangeness index; by level of strangeness, by factor 1 to 5, by S and M indicators, by general chronological order, and so on.

Therefore we can make information widely available, by coding our entries onto perforated cards with special catalogue listings extracted when required for specific re- search studies.

#### 5. Aim of the study.

The intention is "to study possible correlation between the different indices; in function and location, time and circumstance; also to possible discover a "scenario" for the phenomenon, ie the mechanics of its appearance, its reactions, its evolution and in the end (ideally !) to find out what it is !

#### 6. The present situation.

Various catalogues of cases have already been created (eg by level of hight, by factor 1 to 5, by strange cases and the links with science-fiction and mythology, etc.)

These lists have not actually produced any particular correlation which might be significant with regard to the answers we seek. Similarly, annual or monthly statistics extracted from each set of files are not within the scope of my study. In truth, the very small number of cases in my possession does not allow me to conduct any statistical, analytical or comparative studies which are likely to produce interesting results. The first step, therefore, is to expand any rather meagre files. This is, of course, the reason why I made an appeal to all members and collaborators of the EWT, asking them to send me all the cases they had which fell within the limits of my study. (3)

#### 7. General remarks.

Unfortunately, I must confess, this study is very subjective. The initial choice of indices is arbitrary and will always be incomplete. When describing a particular index to a case the relevant one is shown clearly by the reported facts in only a few instances.

There is also some overlap. This enforces a choice and a personal interpretation, but this must be inevitable and inherent within this kind of work.  
I would be pleased to receive any criticisms or useful suggestions regarding the basis of this research and any feature of its progress.

Jean-Luc Overall

Document for EWT - JOL 820513.

- (1) This list of indices and characteristics has already been sent out to EWT members, document JOL 810709.
  - (2) For more information see "Statuts of the files", document JOL 810615.
  - (3) See my note, JOL 810702.
- \* This document have been written in french language by M. Jean-Luc Overall. The editor thanks Miss Jenny Randles for the english translation.

## CATALOGUE OF NEGATIVE TYPE 1 PHENOMENA REPORTS IN BELGIUM

The present list gathers together all alleged type-1 UFO cases plus other apparently strange phenomena occurred at ground level, reported in Belgium since 1698, which have been explained in conventional terms. The information contained herewith is, from left to right:

Date (year, month, day), time, location, belgian province (code according to the UFOCAT convention for Belgian entries), type of explanation, and researcher or source respon-

-sible for proper identification. A code for events originally not associated with the UFO phenomena (\*) is included after data when appropriate (lone creature sightings are not includes).

Jacques Bonabot - Liste des ph  nom  nes de type 1 n  gatifs pour la Belgique.

#### A PRELIMINARY LISTING OF ITALIAN TYPE-1 "NEGATIVE" EVENTS

In this brief list, most Italian "negative" cases happened at ground level. Some entries are still in Mr Verga's files while others are unknown to the author. These last one will be received through italian researchers and the datas will be known to the EWT members. A need for comparing this italian negative cases with actual entries is opportune. (Jacques Bonabot.)

Lone creature cases haven't been included in the list. Obviously, these (and the ones I'll present afterwards) aren't the sole Italian Type-1 identified cases; only in recent time researchers have started to select the Italian UFO casuistry, so there is still a lot of work to do. Let's remember that most cases of our samples have very few data about the related event and they are absolutely insufficient to look for an objective identification, as well as to be able to be considered in a research work of any kind. In my specific situation, the sample available for a study is around 15 % out of the whole casuistry (ITACAT)

Maurizio Verga

\* EWT Document - Maurizio Verga MVA 820209.

## NOTES TO OUR E.W.T. MEMBERS

\* Questionnaire for awake/asleep interface cases

This document has been sent by Mr Verga to the Editor. This paper came from our coworker Mr. Keith Basterfied. Therefore we would be glad and curious to receive a paper from Mr Basterfied which explain this hypothesis. It is necessary to understand the paper we received from Mr Verga. Thank you.

\* We are unable to present documents in english language coming from members who have some difficulties to write them. Please contact Miss Jenny Randles for such translation.

\* We received numerous lists and we are a little disturbed by all this ones. Too much lists and a lack of real research documents and short studies.

In the coming NOTICE we will publish:

A brief list of italian type-1 trace cases by Mr Maurizio Verga.

A computer index of the new catalogue of UFO landing reports in the Iberian peninsula by Mr Vicente Juan Ballester Olmos and Mr J.A. Fernandez.

\* Many members wish to receive more data for their own studies, as Mr Verga, Overall and Gamard. Therefore, the Editor is able to reproduce addition to previous lists if they are made in a very similar form and presentation.

\* Free donations with a minimum of 250 Belgian Francs are welcome to assure the edition of NOTICE

To: Mrs Jenny Deduytsche. Leopold I laan, 141. B-8000 Brugge, Belgium.

Please don't sent checks - only with international money orders - thank you.

Les donations d'un minimum de 250 Francs Belges sont les bienvenus. Elles permettent l'édition des NOTICES

A: Mme Jenny Deduytsche. Leopold I laan, 141. B-8000 Brugge, Belgique.

Ne pas envoyer de chèques s.v.p. Uniquement par mandat international. Merci.
